Safe Control of Operations...

WELCOME TO DEVELOP TRAINING LTD

Helping you get the balance right

It can be challenging to strike a balance between the demands of day to day operations, the need for skilled staff and meeting changes in legislation. Develop can help. We work with many industry sectors, providing quality training consultancy and training and assessment programmes. We have specialist teams, who are experienced trainers, with a strong industry background. As a result we develop and provide tailored programmes that incorporate best working practices, your own procedures and legislative requirements.

As a leading provider of Technical and Specialist Safety Training within the utilities, defence estate and regulated business sectors, Develop Training Ltd offers the simplest route to a well trained, competent workforce. Our full range of training and consultancy solutions includes technical training, specialist safety, general health & safety and management development. We deliver to all levels of staff, from apprentices and new recruits to Authorised Persons and senior executives.

Areas of Expertise

- Occupational Safety & Health
- Mechanical & Electrical Engineering
- Construction
- Gas Engineering and Safety
- Management and Supervision
- Building Services Engineering
- Water & Wastewater
- Environment
- Rail Technology
- Team Building & Management Development

Quality Assured

We operate a Quality Management system which is certified under the new quality standard ISO9001:2000. Our trainers and assessors hold the latest technical and training qualifications and Develop is recognized as an Investor in People company.

This brochure provides details of just part of what we do.

INVESTOR IN PEOPLE

GAS NETWORK ENGINEERING

The gas industry is under constant public scrutiny. In addition, regulations and the pressure of continual change mean the need to satisfy the demands and expectations of us all has never been higher. The ever-increasing demands for evidence of competence and compliance with operational safety cases can be challenging.

Develop Training Limited provides support and assessment for gas contractors, self-lay installers and public gas transporters. With access to a wide range of services and resources, Develop continues to provide clients with quality training and assessment solutions that incorporate best work practices along with your own procedures and legislative requirements. We will also try to establish funding for programmes.

- The installation of gas mains and service pipes - GNO
- Maintenance of existing assets
- The latest trenchless techniques
- Design requirements for new and replacement gas networks
- Statutory training requirements
- Enhancement of skills at management & supervisory levels
- Gas Network Safety
- Assessment of competence
- Apprentice training
- Safety in excavations

“ The Develop organisation has proven to be very reliable and responsive to our needs, generally meeting or exceeding timescales from initial scope through design, to delivery of solutions.

nationalgrid

We have found that when problems arise, they respond positively and work hard to put things right. They have a solid 'quality' mindset, which makes them challenge our assumptions about needs and interventions. This combined with the proficient delivery of our agreed solutions is where we value the relationship with Develop, as our experience with other providers has not always been the same.

From 2004, National Grid awarded all its Gas Technical Training (including HSE) contracts, to Develop and they are now undertaking some training within our Electricity Transmission business. Our confidence level is sufficiently high that we see a long term relationship with Develop as our key external training partner.”

Mr Tony Moloney
UK Training Manager
Shared Services
National Grid

“Develop has proven to be a provider of quality training and consultancy solutions for the M1 Corridor Gas Alliance. We have continued to work together to create meaningful and achievable products to suit the particular needs of our business. The events offered on an Open Program basis have proved to be particularly useful as it allows us to release smaller numbers of employees, thereby minimizing the disruption to our day-to-day operations. I continue to receive good feedback from our employees attending courses at Develop, Derby, where the workshop and welfare facilities are excellent.”

Ian Holiday, Safety & Training Manager, M1 Alliance/AMEC

“Develop have worked with us at BBUSL to provide quality bespoke training solutions for the North West Gas Alliance, a partnership with National Grid and Balfour Beatty Utility Solutions. Events like the City & Guilds Deep Excavation program were developed in partnership to suit the specific needs of the industry and have become accepted as best practice nationally within the utility sector.”

John Cowell, Balfour Beatty Utility Solutions

Gas Network Operations Level 1

City & Guilds

Provides the basic skills required to ensure all new starters in the Gas industry perform to an acceptable level of Safety and technical performance.

energy&utilityskills

Gas Network Operations Level 2 (Services)

City & Guilds

Provides the technical competencies required for all gas distribution and multi-utility operatives wishing to become team leaders at service layer level. This qualification replaces GD 1,2 and 4.

energy&utilityskills

Gas Network Operations Level 2 (Mains)

City & Guilds

Provides the technical competencies required for all gas distribution and multi-utility operatives wishing to become team leaders at mains layer level. This qualification replaces GD 1,2,3 or 5.

energy&utilityskills

Gas Network Operations Level 3 (Craftsperson)

City & Guilds

Provides the technical competencies required for all gas distribution and multi-utility operatives wishing to operate at craftsperson level on the gas network. This qualification supports the succession planning process by developing candidates that are viewed as future assets.

energy&utilityskills

Process

The NVQ is designed for all operatives working on the Gas Network and can be undertaken by new starters or existing GD operatives. The process requires the candidates to be assessed "on site" and "in centre" and therefore candidate progression to the achievement of this award will be dependent on activities conducted in the workplace.

All assessors are industry trained, with a minimum of an A1 qualification.

Management and Leadership - Gas Network Supervision Level 3

Designed to prove the competence of supervisors operating within the gas distribution network, this qualification provides the platform for new and existing supervisory staff to develop and maintain both behavioural and technical skills at the required industry levels.

energy&utilityskills

To book a course please call Customer Services on: 0800 876 6708 or email enquiries@developtraining.co.uk

Aim

To provide the knowledge and skill required to ensure excavations comply with the relevant legislation and safe systems of work.

On completion of the course the candidate will be able to:

- Describe the relevant legal requirements applicable to excavations
- Install and identify mechanisms and procedures for different types of ground conditions
- Identify and install components used for trench support
- Understand and implement Safe Systems of Work
- Identify and install the appropriate trench support systems
- Carry out all works in accordance with health and safety requirements
- Carry out risk assessments associated with ground support
- Discuss and offer practical solutions to ground support problems

This course is certified under City & Guilds accreditation.

Safe Control of Operations

Aim

To ensure all personnel who work on the UK gas infrastructure are aware of the procedural requirements and their responsibilities under the Safe Control of Operation Permitry System.

The SCO training consists of six courses, each course specifically tailored to meet individual operational competence requirements.

The courses are:

- SCO 1 & 2 - **Competent Persons** (ROs/Team Leaders)
- SCO 1 & 2 - **Authorising Engineers and Competent Persons** (NROs supervisory level)
- SCO 4 - **Authorising Engineers and Competent Persons** (NROs)
- SCO 4 & 5 - **Authorising Engineers and Competent Persons** (NROs)
- SCO 5 - **Authorising Engineers and Competent Persons** (ROs)
- SCO 1 & 5 - **Originators of Routine Operations**
